

KEY INVESTOR INFORMATION

This document provides you with key investor information about this Fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this Fund. You are advised to read it so you can make an informed decision about whether to invest.

VanEck Junior Gold Miners UCITS ETF (the "Fund")

a sub-fund of VanEck UCITS ETFs plc (the "Company")
Share Class: USD A ISIN: IE00BQQP9G91

This Fund is managed by VanEck Asset Management B.V., a subsidiary of Van Eck Associates Corporation.

Objectives and Investment Policy

The Fund's investment objective is to track, before fees and expenses, the price and yield performance of the MVIS Global Junior Gold Miners Index (the "Index"). In order to seek to achieve its investment objective, the investment policy of the Fund is to invest in a portfolio of equity securities that as far as possible and practicable consists of all or substantially all of the component securities of the Index. The Index includes companies that generate at least 50% (25% of current components) of their revenues from gold mining and/or silver mining or have mining projects with the potential to generate at least 50% of their revenues from gold and/or silver when developed. Such companies may include smaller companies and foreign issuers. At each quarterly review of the Index, the Index limits the maximum weight of any single stock to 7 %.

The Fund may invest up to 15% of its Net Asset Value directly in shares issued by companies listed on the Shanghai Stock Exchange or the Shenzhen Stock Exchange. The Fund may invest more than 20% of its Net Asset Value in emerging markets.

The Fund invests in the underlying (physical) securities that make up the Index and does not take part in securities lending.

The Fund may not invest more than 10% of its Net Asset Value in open-ended collective investment schemes.

Furthermore, the Fund may not invest less than 51% of its Net Asset Value in equity securities which constitute "equity participation" within the meaning of section 2, Article 8 of the German Investment Tax Act.

The Fund, using a "passive" or indexing investment approach, attempts to approximate the investment performance of the Index by investing in a portfolio of securities that generally replicates the Index. The Investment Manager will regularly monitor the Fund's tracking accuracy.

Recommendation: This Fund may not be appropriate for investors who plan to withdraw their money within 5 years.

- Fund's base currency: U.S. Dollar
- Distribution policy: Income accumulated

The shares are admitted for trading on various stock exchanges and can be traded on the secondary market. The price of the shares offered on the secondary market may deviate from the net asset value of the shares. The return of the Fund is directly related to the return of the underlying assets minus the costs associated with the Fund. If the performance of the underlying assets decreases, the performance of the Fund will also decrease. There is no capital protection against Market Risk.

Risk and Reward Profile

The risk and reward indicator is calculated using historical and simulated historical data. Historical data may not be a reliable indication for the future. Therefore, the risk classification may change over time.

Even if the Fund is in the lowest risk category, it does not mean it is risk free or that capital is guaranteed or protected.

This Fund is ranked at 7 because funds of this type have experienced very high rises and falls in value in the past.

Investments in gold and silver mining companies are subject to sector-specific risks which include competitive pressures, dependency on the price of gold and silver bullion, and worldwide economic, financial and political events.

Investments in early stage mining companies are subject to elevated risks which include the potential that the companies' properties may not ultimately produce gold, major expenditures may be required to establish reserves, and many early stage miners operate at a loss and are dependent on securing financing.

The following risks can be materially relevant but are not necessarily adequately captured by the synthetic risk indicator and may cause additional loss:

- Risk of Investing in Natural Resources Companies: Investments in natural

resources and natural resources companies, which include companies engaged in alternatives (e.g., water and alternative energy), base and industrial metals, energy and precious metals, are very dependent on the demand for, and supply and price of, natural resources and can be significantly affected by events relating to these industries, including international political and economic developments, embargoes, tariffs, inflation, weather and natural disasters, limits on exploration, often changes in the supply and demand for natural resources and other factors.

- Industry or Sector Concentration Risk: The Fund's assets may be concentrated in one or more particular sectors or industries. The Fund may be subject to the risk that economic, political or other conditions that have a negative effect on the relevant sectors or industries will negatively impact the Fund's performance to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.
- Risk of investing in smaller companies: The securities of smaller companies may be more volatile and less liquid than the securities of large companies. Smaller companies, when compared with larger companies, may have a shorter history of operations, fewer financial resources, less competitive strength, may have a less diversified product line, may be more susceptible to market pressure and may have a smaller market for their securities.
